

Atmospheric Propagation

Daniel S. Cargill

July 31, 2017

1 Milestones

1.1 AFOSR: UQ for beam control

- Finish and publish propagation through full correlated index variations
- Finish and publish Lagrangian approach to atmospheric propagation (Improved Scaling Laws)
- Study use a full Helmholtz equation for atmospheric propagation
- Finish and publish Bayesian approach to wave front sensing and phase reconstruction
- Start thermal blooming work
- Start rough surface scattering

1.2 HADES/Titled Arrays

- Finish and publish work on BQ in tilted arrays (with Mark Spencer)
- Start study comparing tilted array to full aperture (we should talk about this)
